

Date: 10th August 2011

Participants:

T. d. S. Rolo, D. Haenschke

Discussion about functional modules, and dependency of coordinate systems

Naming of translational and rotational degrees of freedom for all modules

Questions:

Is there an optimal dependency chain of individual coordinate systems, in such a way that realignment motions can be kept to a minimum?

Answers to questions from last meeting:

none

Actions:

Draw sketch of coordinate systems and intersection requirements (as simple as possible) DH

Overview table template: TR

Coordinate dependency graph: TR

Next meeting: Monday, 17th August 2011
